

PRODUCE PEDIGREES ON DEMAND

Progeny Anywhere is the pedigree drawing technology used in our software. We simply removed the control and license it directly to organizations or software vendors with programming resources. The control comes in two flavors - Java and ActiveX - to meet the needs of your current computing environment. Feed your current data into the Progeny Anywhere control via standard XML format. The control formats the data and generates a pedigree, providing the same features and functionality available within our software.

YOUR DATA YOUR WAY

The data behind the pedigree can come from anywhere! The resulting pedigree can be customized the way you want. Utilize pedigree icon symbols and icon subtext to visualize your data.

INVEST IN PEDIGREE TECHNOLOGY

Displaying pedigrees in an easily readable and presentable diagram is a complex programming feat. Licensing our technology can give you the edge you need when it comes to displaying pedigrees. The Progeny Anywhere development license is offered on an academic or commercial basis. Please contact us for a price quote to meet your specific environment.

Features	Benefits
Embedded Pedigree Technology	Add pedigree technology to your existing applications without having to write any code.
Pedigrees on Demand	Display pedigrees directly from your database with the click of a button.
Edit the Pedigree	Make changes to the pedigree and save those changes back to your database.
XML Interface	Exchange data via standard XML format; documentation explains exactly how to setup your programming calls.
Cost Effective	Save programming time by implementing a proven pedigree technology that has been in use commercially over the last 7 years.
